

Balazs Ferencz

Junior Web Developer

Personal Statement

I've been studying Web Development since early 2020 on a self-taught basis. Ever since I created my first "hello world" my motivation and drive have only ever grown day by day. Being self-taught makes me synonymous with motivated, result-driven, resilient, and self-starter by definition. I've finished countless courses on various platforms, while the quality and complexity of my projects have consistently improved. I am currently looking for an entry-level opportunity where I can further my knowledge so that I can add real value to any professional organization.
